

CLAIM AMENDMENTS

1 - 11. (canceled)

1           12. (new) In combination with a power track having a  
2 slot in which are exposed electrical conductors, an adapter com-  
3 prising:

4           a housing having an insert part fittable into the slot;

5           a shaft extending into the insert part and pivotal about  
6 a shaft axis in the housing between a use position and a nonuse  
7 position

8           a conductive contact element rotationally fixed to the  
9 shaft, having a contact projecting radially from the shaft and  
10 engageable with one of the power-track conductors when the insert  
11 part is fitted to the slot and the shaft is in the use position,  
12 and having a one-piece plug-type terminal extending generally  
13 parallel to the axis; and

14           a hookup wire provided with another plug-type terminal  
15 mated with the contact-element terminal.

1           13. (new) The power-track adapter defined in claim 12  
2 wherein the contact is unitarily formed with the contact element.

1           14. (new) The power-track adapter defined in claim 13  
2 wherein the contact element is formed as a spring urging the  
3 contact radially outward.

1           15. (new) The power-track adapter defined in claim 12  
2 wherein the control shaft is at least partially hollow.

1           16. (new) The power-track adapter defined in claim 15  
2 wherein the control shaft is formed with a throughgoing passage,  
3 the adapter further comprising  
4 another feed wire extending through the passage.

1           17. (new) The power-track adapter defined in claim 12,  
2 further comprising  
3 a second conductive contact element separate from the  
4 first-mentioned contact element, rotationally fixed to the shaft,  
5 having a contact projecting radially from the shaft, and engageable  
6 with another of the power-track conductors when the insert part is  
7 fitted to the slot and the shaft is in the use position, and having  
8 a one-piece plug-type terminal extending generally parallel to the  
9 axis; and  
10 a second hookup wire separate from the first-mentioned  
11 hookup wire and provided with a plug-type terminal mated with the  
12 second contact-element terminal.

1                   18. (new) The power-track adapter defined in claim 18  
2    wherein the other plug-type terminal of the hookup wire is dis-  
3    placeable axially in the housing for connection with and disconnec-  
4    tion from the contact-element terminal.
